HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Michael Morency on 8 December 2011.

The application has been amended as follows:

In the claims:

In claim 1 line 3, please insert the phrase-- forming a plurality of reaction elements on a first substrate, wherein forming a reaction element comprises: -- before the words "forming at least two first electrodes".

In claim 1 line 4, please replace the word "a" with the words --the--.

In claim 1 line 9, please insert the word --and-- after the phrase "first substrate,".

In claim 1 line 11, please replace the punctuation "," at the end of the line with the punctuation " ; ".

In claim 1 line 13, please replace the punctuation "," in between the phrases "substrate" and "and" with the punctuation " ; ".

In claim 1 line 17 please replace the punctuation " ; " at the end of the line with the punctuation " , ".

2. The following is an examiner's statement of reasons for allowance:
3. The prior art does not disclose nor render obvious all the cumulative limitations of claim 1, with particular attention to the specific limitations of "forming at least one cavity, each with a space for a capillary, on one side of a second substrate; and forming at least one capillary, by attaching the first side of the at least one reaction element into at least one of the cavities in the second substrate..." within the context of the overall invention. The prior art does not disclose the formation of a capillary with a reaction element with electrode on a first and second side of a substrate, electrically connected through a via hole, and subsequently placed into a second substrate cavity.
4. The closest prior art of record is considered to be Musho et al (US 2003/0201175 A1) and Wang et al (US 2006/0064035 A1).

Musho discloses a first substrate (Fig. 3 #1), an assay reagent applies to the entire first side of the substrate to form a reaction element (pg. 3 [0027]), and a second substrate that the first substrate is mounted on to form capillaries to introducing biomaterial through (pg. 2 [0017] and pg. 4 [0033]), at least 2 first electrodes formed on the first side of the first substrate (Fig. 3 #'s 11) with the assay reagent applies throughout the first electrodes (pg. 3 [0027]), and a second electrode on the second side (Fig. 3 #9) opposite to the first side, which is electrically connected to at least one of the first electrodes (Fig. 3 #11) on the first side through a hole, which is coated with a conductor (pg. 3 [0031]). However, Musho fails to disclose or render obvious the use of such a sensor attached to a second substrate with a capillary.

As to claim 1, Wang discloses a method of producing a biomaterial measuring device that uses an electrochemical assay comprising a first substrate (see Fig. 21 #502) in which an assay

reagent is applied (Fig. 21 #506) which is then cut to form an individual reaction element (Karinka et al US 2004/0067166 A1 pg. 9 [0082] incorporated by reference in Wang pg. 9 [0101]) attaching a first reaction element (Fig. 7 #130) to a predetermined portion (Fig. 7 #140) of a second substrate (Fig. 7 #128) with more than one capillary for feeding biomaterial through (Fig. 7 and 8 #150 and pg.6 [0068]). However, Wang does not disclose or render obvious the use of a reaction element with electrodes on a first and second side, electrically connected through a via hole, with the second support. Such a combination would not have been obvious because the reaction elements used with Wang have all electrodes on a single side, whereas such a modification of providing electrodes on both sides of a substrate would not provide proper electrical connections.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LOUIS RUFO whose telephone number is (571)270-7716. The examiner can normally be reached on Monday through Thursday 9:30 AM to 3:30 pm and every other Friday.
